Physical Freaks are Abundant
--Cannibalism In Vogue.

New York, May 6-The World says:
Professor Frederick Starr, of the Chicago
University, has just returned rom Old
Mexico, wwhere she has been making
plaster casis and accurate measurements of the most primitive people on the American continent. They are Indians, tribully known as Mivtecos, Triquis, Zapotecs and so on. They live in and about.

Oaxaco, Mexico. Professor Starr made fifteen measurements each of 1,125 individuals, and secure the will keep they are in the secretion of the liver and free they part to fifteen measurements each of 1,125 individuals, and secure healthy digestion.

"Harquia Haia, Yuma County, Ariz, November 9, 188".

"Your Radway's Pills have warked wonderfully in my family. My children when sick have received instantianeous and complete rolled by their use. Sudden codies, sore throat, I find I can qüickly cure by the use of your Ready Relief and Pills. They should not be wanting in any well-kept home.

"That doubly serves what helps at

the foot of the Mexican Indian, however, for the peculiarity is as strongly marked n the women, who wear no shoes, except in one tribe as in the men. The toes are nore like fingers; they work independ-ently of each other, especially the great e. In the one tribe whose women wear noes these are more like soft leather nitis out of which the toes protrude so that they can grasp and pick up a pebde or a stick. They all have peculiar hands. Their

their fingers are paired, the first and cond finger on each hand, and also the hird and fourth, being practically equal length. In a white man's hand ngth of the fingers varies greatly. The ast joint of the thumb is very short, times there is only room on it for blunt thumbnall, running right to the oint itself. The fingernails of all the ribes are strangely malformed, bing mort, thick, round and hard and curve inward like the claws of an animal. I sked the Indians the reason for this and they replied that working in cold waer made their fingermills crocked. This do not believe. Either the peculiarity is the result of some obscure disease, as I am inclined to think, or it may constitute in inherent characteristic of the strange pe. Further study will be made of this

did not expect to find the missing link Mexico. There is a man in this couny whom some would call by this name have long intended to get an X-ray tograph of a negro who has a rudisentary tail, but the only X-ray photoraphs yet taken of negroes have reted seriously to the subjects. Posaly the excess of pigment in the skin may account for the sorious burns they ceive from the X-ray light. But the act that there is a man ith a tail prove othing more than the peculiarities hair or teeth of an unnatural numbe

The nine fribes which I visited live ractically as they did before Columbia made his first voyage. Though nominally bristian, they still maintain the wor

hip of their pagan gods. Among the Zapotecs one finds women their natural supremacy. The women mong the American Indians were the heads of families until the white man came. If you would meet a family of Zaotecs in an ex-curt on the road and should inquire of them the wawy, it would be the woman who would reply and she would give you a better answer and be able to express herself more intelligently than the man. If the man should venture to speak first he would e promptly hushed up. In all the affairs of the family the woman exercises he ruling hand. If a man should appear n the markets of Tshuantepec he would e promptly driven out. The men are ever allowed to carry on the transactions of buying and selling in the mar-

kets of the Zapotecs. Their trade is barter, their clothing i for the man a breech clout and for the woman a strip of cloth wound around the waist. The Juaves are fishermen hey weawye nets, and hollow primitive canoes out of logs. The other tribes til he soil and barter with the Junves for sh and salt, which they scrape up rude and unrefined, from flats where seawater evaporates. They have been hich is unusual for primitive people They weave rought cloth and make pot-

In all the tribes the three-house aringement prevalls. Every family has s food hut (made of wattled cane), its uting hut in which the sleeping is also one, and the god-house, in which the images of the rain-god, the bear-god and other deities are housed, and which is used as the guest chamber, when any is

I could hardly have chosen a worse time for this trip. Even in remote villages the Mexican Indians have heard of the recent conquests of the United States; they know that the Mexican government is increasing its defenses, and made it hard to get measurements, and especially to secure casts, though I had every assistance from the Mexican government. I had with me an expert modeller, besides Mexican attendants. When we wished to get a cast we persuide must while we moulded his face, chest and neck with plaster.. In this way we secured thirty-five casts, which will be arranged in the museum of the univend-ty. The casts and measurements are surorising. The Mixteess have not in their veins a drop of African blood; and yet they have many facial characteristics of the neuro-the broad, flat nose, the thick, protruiting tips, the wide, low skull. The lowest types are quite repulsive.

The Indians admit that cannibalism exsted among them until recently. I have so doubt that some of the old men I saw. in the villages had eaten human first, though pone of them would admit it. Mexico is a country prolific in human anomalies. Extra toes and fingers are common; albinos and similar irregularities are common. I have seen a child over a year old who, I believe, should have been another Slamese twin. There is one well developed child, out of whose head grows a perfect leg and arms of a scond child. There is nothing tribal in

## Padway's Pills SECURE PERFECT

DICESTION

uals, and secured thirty-five plaster casts of busts and faces of these strange people, of whom he gives the following account:

These Mexican Indians whomm Ih ave beens tudyingh ave two strangely marked physical peculiarities. The great toe is more widely separated from the others than is common. In other similar cases it has been suggested that the formation is due to the use of sandals fastened on by thongs passing between the great toe and the second. This cannot account for and the second. This cannot account for any one so afflicted will give Radway's Plijs a trial they will surely cure them, matism is gone afflicted will give them, if any one so afflicted will surely cure them, Pilis a trial they will surely cure them, for I believe it all comes from the system being out of order-the liver not doing the work.

GEORGE S. SCALLY.

"To Nassau Street, New York."

Be sure to get "Radway's" and see that the name is on what you buy.

these peculiarities. They are due, I believe to the mixture of widely varrying peoples that has taken place in Mexico. The Triqui Indians are the most degraded in Mexico. One of their villages refused to permit us to take photographs or casts, in spite of the order of the government, and said that if we came near there wewer machetes and bullets for us. They are prope to drunkenness, partly because of their cold, clammy climare, and very immoral. Some of their tribal ways I cannot describe. Altogether they are a very low and primitive type. They are a strange people.

Starvation Wages, and Sometimes None at All.

DOLLARS A WEEK

More Than an Entire Working Family Can Make.

Chicago, May 6.-A Tribune special from Washington says: A principal witness before the Industrial commiss was Mrs. Florence Kelley, formerly chief factory inspector of Hilmois, who gave some interesting testimony as to the sweatshops in Chicago. She explaned that, no child under 14 years of age is allowed to work in any factory, shop, or mercan tile establishment. No educational test is required. The greater part of the inspection was devoted to sweatshops of Chi cago, where the sanitary conditons were had. Records of the number employed n the sweatshops showel about 17,000 per sons. The inspection in Illinois is devoted to a great extent to protecting the public health by watching the sweatshops to deteet the presence of contagion. The German and Swedish shops are clean, she said, while the Jewish and Italian shops are generally unclean and dangerous. She said that of the 200,000 factory workers in Illionis 150,000 are in Cook county. She and found nine mationalities represented in the sweatshops. German anl Russian Jews, Bohemians and Polish predomi nated in numbers, and each of these naionalities was in about equal proportions. She had never found native Americans the sweatshops, though some of this class were engaged in manufacturing clothing in their own homes and we difficult to locate. These, she said, formed the most dangerous class of garment

workers from a sanitary point of view. Practically all the clothing seld in Chiago, she said, is made in sweatshops there. There was no other set of people who were so poor in Chicago as the garment workers. Women in the sweatshops did not support themselves by their work. Some of them were married women and others widows, who received aid from charitable societies.

They had prosecuted many cases under the law which forbade children working in the sweatshops without a certificate showing them to be 14 years of age, but bildren could get these certificates at any age, so that today a thousand little girls are working in the sweatshops there. Th fream of the awestshop worker was that man, wife and four children might make \$10 a week the year round, but i was safe to sad that among the Jewish and Italian workers none of them ever eccured so much pay. Children frequestly work for six months without pay, with a promise that they will at the end of that time get \$1 a week and finally \$3 or \$4. The employes of the aweatshops work about three months at a stretch, with an equal amount of idle time The inspectors are forbidden to inquire

nto the wage question, but the witness, from long residence among the sweathop workers, stated that she did sot hard matter to get accurate stateable to tell the time, and stop work only when it is too dark to continue.

Mrs. Kelley was sure that contagious fation through the discovery and marveldisease are spread by the prevalence of our success of Swamp-Root in purifying Kamer & Co., Binghamton, N. V. the awartshop system. In one fastance she found a woman working on an evercost in the same room where a person was dving of smallnox. The witness con demned the system and thought it ought to be shollshed. The persons who are compelled to depend upon the garment trade for a living are not able to send their children to school until they are 16 увати община,

An ordinary family, she said, all of the members of which are employed making carments, cannot earn \$10 per week. The garmest workers are employed only about seven or eight months in the year During the period when they are not emplayed they are dependent upon charity The sweatshop law of Illinois is the worst of all the states," said the witness. An effort has been made for the last ten years to organize the garment workers in Chicago, but thus far these efforts have been unavailing. Public eninter has been with the garment weekers to the exten that thousands of dollars were subscribed to support the workers in one of their strikes. The manufacturers are, however, against the movement and have waged a successful war in opposition t . There are so personal eafery laws in Until the fast session of the legislature there was a compulsory fire escape law, but this law was repealed last passed purely for the benefit of the sena-

or who introduced the hill The witness thought that the use of foot-power machinery should be abound ed as a menace to health. The children said, are generally in poor physical con dition. The witness approved the Sulper bill in enegroes providing that the clo of the treasury department, the same as the cigar trade

Mrs. Keller inforzed the New York factory haw and said she hoped to see the dusc's and away from the factories unhey are If years of age. She also believed the night-hour law

She thought the public schools of Chin care more deferent in seminors, and said she had known children in stores to be kept at work from 6.a. m. until minight.
